## In Washington State, 1 Wk Till Primary Votes Are Counted, Democrat Gov Inslee Will Advance to General Election, But Who Will Oppose Him? Heck Will Fight for Open Lt Gov Seat, Opposed By Any of 3 Comers; Incumbent Atty General Ferguson Will Advance, Likely to Face GOP's Larkin:

1 week till votes are counted in the Washington State primary for Governor and other statewide offices, 2 incumbent Democrats are certain to advance to the 11/03/20 general election in contests for Governor and Attorney General, and at least 1 Democrat is certain to advance to fill the open seat for Lieutenant Governor, according to SurveyUSA research conducted exclusively for KING-TV in Seattle.

At a time of remarkable turbulence in the city of Seattle that is the focus of national and international attention, with federal troops joining local police to do battle with demonstrators, and with 30% of likely primary voters telling SurveyUSA they have already returned a ballot, here's how the top 3 statewide contests stand:

In the primary for Governor at this hour ...

- \* Incumbent Democrat Jay Inslee gets 55%. Whichever 1 candidate finishes 2nd to Inslee will face him in the general election on 11/03/20.
- \* Republican Loren Culp is at 9%, effectively even with the candidate behind him.
- \* Republican Tim Eyman is at 8%, effectively even with the candidate behind him.
- \* Republican Joshua Freed is at 6%, effectively even with Culp and Eyman.
- \* Any 1 of these 3 Republicans has a plausible path to emerging with the 2nd ticket out of the primary.
- \* Further back, Republican Raul Garcia is at 4%.
- \* Republican Phil Fortunato is at 3%.
- \* Culp is the only Republican with momentum; compared to an identical SurveyUSA poll in May 2020, his support has doubled.
- \* For Culp to advance, young, high-school educated, white, evangelical Republican women will need to turn out in large numbers.
- \* For Eyman to advance, older voters who identify as "very conservative" will need to turn out in large numbers.

In the primary to fill the open seat for Lieutenant Governor at this hour ...

- \* Democrat Denny Heck is certain to advance, with 34% of the vote.
- \* Republican Joseph Brumbles and Democrat Marko Liias are tied at 14% each.
- \* Close behind, and very much in the mix, is Republican Ann Davison Sattler.
- \* Among voters who have already returned a ballot, Brumbles leads Liias 19% to 13%; enthusiasm may favor the Republican.
- \* Brumbles leads Liias narrowly among independents; Liias leads Brumbles narrowly among moderates.
- \* Brumbles leads Liias 2:1 among Protestants and Catholics.
- \* Liias leads Brumbles 2:1 among voters who are not part of an organized religion.
- \* Liias leads Brumbles 12:1 in LGBTQ households.
- \* Liias leads Brumbles 5:1 among voters who ride mass transit regularly.
- \* Democratic Incumbent Lieutenant Governor Cyrus Habib is not seeking re-election.

In the primary for Attorney General of Washington State at this hour ...

- \* Incumbent Democrat Bob Ferguson is certain to advance; he gets 52% of the primary vote.
- \* Republican challenger Matt Larkin, at 13%, is likely to be his 11/03/20 challenger.
- \* Republican Brett Rogers and Republican Mike Vaska are in single digits, further back.

© 2020 SurveyUSA. An identical SurveyUSA poll in May 2020, Larkin is the only Republican with momentum, up from 8% then to 13% today.

**Statement of Methodology:** SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. Landline telephone sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from Aristotle or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. Responses are minimally weighted to U.S. Census or voter file targets for gender, age and race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to [editor@surveyusa.com](mailto:editor@surveyusa.com).
